LED Batten Light
DB186A/B-PLUS Series

Introduction

This is a high quality LED batten with high lumen efficiency and modular design. It adopts high lumen efficiency SMD light source, PC cover is internal stripe design which makes a uniform light output. Based on adjustable CCT and adjustable power functions, it has plug in/plug out modular with microwave sensor, emergency, microwave sensor+emergency which can be stocked as accessory. For installation, it utilizes plastic flexibility to clips the light source part into bracket, the end cap mounting hole allows loop in/ loop out connection, which offers more possibility for wider applications.

Features

- Compact design with screwless surface, which fits the ceiling tightly
- Adjustable power with DIP switch
- High lumen efficiency, 150lm/W@4000K
- Functions: adjustable CCT, microwave sensor, emergency, microwave sensor+emergency
- End cap with mounting hole for loop in/ loop out connection
- Size options: 1200/1500/1800mm
- Internal flicker free driver

Application Areas

It is widely used in workshop, warehouse, parking lot, factories, shopping mall etc.

Datasheet (Emergency)

Input power	3W
Discharge power	2W
Rated Input Voltage(V)	AC230V
Frequency	50/60Hz
Input Voltage	AC200-240V
Rated Input Current	≤0.03A
Battery	6.4V 1500mAh (LifepO4)
Lifetime	Over 2000 cycles
Battery duration	≥3hrs
Charge Period	≤24hrs
Emergency switching time	≤1S
Emergency Operating Temp. (°C)	0°C-25°C

Instructions for automatic test option(AT-version)

- 1.Once the unit is powered up it will automaticlly initiate a self test and diagnostics as follows:
- Every 4 seconds: Checks for battery disconnection,charger board fault,lamp failure and transformer failure.
 - Every month: Performs a 3 minutes duration test.
 - Every yeat: Performs a 3 Hours duration test.
- All test functions are factory preset and do not need field adjustment.

2.Dual Colour Indicator LED Status Mesnings

Green	Solid On	Ready/Normal Operation
	Flashing	Testing
Red	Requires Service	
•	One flash, 4 seconds pause	Battery not connected
••	Two flashes, 4 seconds pause	Low battery voltage
•••	Three flashes, 4 seconds pause	Charger board fault
••••	Four flashes, 4 seconds pause	Charger board fault

NOTE:After repairing a service fault,press and hold the test button for 2 seconds to reset the flashing indicator light to green.

3.Manual Testing

Press test button once	30 seconds duration test
Press test button twice within 2 seconds	3 minutes duration test
Press test button 3 times within 2 seconds	30 minutes duration test
Press test button 4 times within 2 seconds	3 hours duration test

- Note:
- 1) After repairing the fault, press and hold the test button for 2 seconds to reset the flashing indicator light to green.
 - 2) This product should be installed by a registered electrician in accordance with local standards and electrical regulations.
 - 3) Ensure the power supply is under isolated before installation.
 - 4) Sealed LiFePO4 rechargeable battery pack, the battery should be replaced when the required duration is no longer achieved.
 - 5) To avoid any damage to the fixture and ensure its performance, the battery should be replaced with same brand and type.

Detection Area			
	1	2	
I	ON	ON	100%
II	ON	-	75%
III	-	ON	50%
IV	-	-	25%

Detection area:

- Sensor test condition:** The test is based on 3m height, the detect distance radius is based on ground, the detect distance can be adjusted through the slide switch.
- Sensor test environment and reference:** The detective range is measured by human body whose stature is around 1.6-1.7M with medium size and traveling speed is around 1.0-1.5M per second. If the stature, bodily form and traveling speed are changed,then the detective range will be changed accordingly.
- Sensor lamp's reaction under open/narrow environment:** Test result will be highly influenced by test environment, the more open environment, the closer detect distance; the narrower environment, the longer detect distance. The detector may do self-excitation in a narrow environment.
- Sensor Setting based on environmental disturbance:** Some environmental disturbances will cause abnormal induction, such as the lamp can not automatically turn off for a long time or the sensor function is invalid, then users can adjust sensor distance to reach the ideal effect. It is recommended to adjust the sensing distance to 50% for the environment where near the heavy equipment, metal sheets and metal pipes, concretewall(<30cm thickness)etc. Recommend to keep 100%sensordistance in open environment. For environment where near the routers, telecommunications base stations, electrical machinery etc, it is recommended to keep the installation distance of more than 5 meters and adjust to 50% sensor distance.

Daylight sensor:

- Notice 1:** The light threshold can be selected through the slide switch, it may cause a large deviation in different lamps.
- Notice 2:** Daylight priority function: Set stand-by period to + ∞, daylight sensor will be priority status. When the ambient light is lower than the daylight sensor setting lux, the lamp will turn on automatically if it detects a moving object. After the moving object leaves, the sensor will enter into stand-by Dim Level, if ambient light is more than ON/OFF lux, the lamp will keep OFF status.
